Education

- **Pace University, Seidenberg School of Computer Science and Information Systems**, New York, NY May 2025
Master of Science in Computer Science – Software Engineering GPA: 3.89/4.0
- **Institute of Information Technology**, Pune, India May 2022
Bachelor of Engineering in Computer Engineering CGPA: 3.3/4.0

Professional Experience

- **Pylon Management**, New York, NY Feb 2026 – Present
Junior ML Engineer
 - Delivered an AI-driven inventory forecasting system using time-series and regression models that cut overstock-related carrying costs by an estimated 20% and eliminated 3+ hours/day of manual demand review.
 - Shipped end-to-end ML pipelines data ingestion, feature engineering, model training, and REST API inference reducing model deployment cycle time from weeks to under 2 days.
 - Surfaced predictive reorder signals directly in the procurement backend, replacing spreadsheet-driven decisions and enabling real-time, data-driven restocking across 5+ product categories.
- **99 Yards**, New York, NY Sep 2024 – Feb 2026
Full Stack Developer Intern
 - Replaced a fully manual ops workflow by engineering a React + Spring Boot + Firebase admin dashboard, giving the team real-time visibility into operations and saving an estimated 15 hours/week of reporting effort.
 - Slashed data pipeline latency by 40% by redesigning Python-based scraping workflows and REST integrations, increasing data freshness from daily batch updates to near-real-time feeds.
 - Achieved a 75% reduction in page load times through targeted frontend profiling, code-splitting, and database query optimization directly improving retention for cross-platform users.
- **Cybage Software Pvt Ltd**, Pune, India Sep 2022 – Jun 2023
Software Engineer
 - Boosted Lighthouse performance and accessibility scores by 35% on 3 production Angular/TypeScript applications serving thousands of users, reducing support tickets related to slow load times.
 - Eliminated a class of race-condition and stale-state bugs by redesigning shared state with Redux and Context API, cutting reported bug frequency by 45% over two release cycles.

Projects

- **CVine – AI-Powered Wine Discovery App** Jan 2025 – May 2025
 - Engineered hybrid ML recommendation engine (content-based + collaborative filtering + Google Vision real-time label recognition) achieving sub-200ms inference on a catalog of 8,000+ wines.
 - Integrated OpenAI API for contextual food-pairing suggestions; optimized MongoDB queries to serve recommendations with <100ms p95 latency under concurrent load.
- **Investment Portal Real-Time Client & Admin Platform** Jul 2025 – Aug 2025
 - Architected a full-stack investment platform (React, Node.js, MongoDB) with live portfolio streaming via Server-Sent Events and JWT role-based access control for two distinct user tiers.
 - Cut API response times by 45% under concurrent load by introducing compound indexes and query profiling; added immutable audit logs to satisfy financial-grade traceability requirements.
- **PaceX – Student Social Networking Platform** Jan 2025 – May 2025
 - Built a real-time social platform (React, Express.js, Firebase) with WebSocket-backed chat, stories, and activity feeds sustaining 100+ concurrent users with no observable degradation.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, Python, Java, SQL, C++
- **Frontend:** React.js, Next.js, Angular, Redux, Context API, HTML5, CSS3, Material UI, Bootstrap
- **Backend & Databases:** Node.js, Express.js, Spring Boot, Firebase, PostgreSQL, MongoDB, RESTful APIs
- **AI / ML:** Scikit-learn, Pandas, NumPy, Time-Series Forecasting, Regression Modeling, Feature Engineering, Model Deployment, OpenAI API
- **Tools & Platforms:** Docker, GitHub Actions, CI/CD, Git, Postman, Swagger/OpenAPI, Vercel, Render, Figma
